

VISHAL BHARDWAJ

Senior Software Engineer

<https://vishalbhardwaj.dev>

PROFESSIONAL SUMMARY

Senior Software Engineer designing distributed systems, writing production Java, and presenting architecture proposals before leading delivery end to end. 10+ years across capital markets, insurance, retail and telecommunication with deep expertise in Spring Boot microservices, Kafka-driven event pipelines, and multi-cloud infrastructure.

EDUCATION

Master of Software Engineering

Sep 2019 – Aug 2020

University of Western Ontario, London, ON · Cloud Computing · Machine Learning · Web Technologies

B.Tech in Computer Science

July 2012 – May 2016

Guru Nanak Dev University, India · CGPA 8.02 / 10

WORK EXPERIENCE

Senior Software Engineer — CITIBANK

Sep 2023 – Present

- Designed and led development of a production monitoring service that consolidates business process health — including PNL workflow status, intraday recon breaks, position breaks, NPV/PV breaks, Flash PNL, and EOD reconciliation — previously scattered across emails and Splunk alerts into a single real-time ITRS dashboard for the prod support team. Architected gRPC-based event collection from 10+ downstream microservices and direct ELK Stack integration via Elasticsearch POST queries, cutting average triage time significantly.
- Architected a high-performance microservices risk management platform using Spring Boot and reactive programming with gRPC-based inter-service communication for real-time trade validation across multiple asset classes.
- Built a real-time FX trading data ingestion pipeline transforming high-volume JSON streams into structured financial datasets, producing PNL, NPV, and PAA metrics for capital markets operations.
- Implemented Kafka (KAAS) for event-driven data streaming; used MongoDB for scalable unstructured dataset management; designed audit-grade schemas for full request/response traceability under compliance requirements.
- Championed adoption of AI coding assistants — Claude Code, Devin, and GitHub Copilot — accelerating sprint delivery and improving code review cycles; drove 90%+ JUnit test coverage across all owned microservices.
- Mentored engineers through code reviews and architectural design sessions; presented system designs to senior management for approval before initiating build.

Senior Software Engineer — LOBLAWS COMPANIES LIMITED

Mar 2022 – Sep 2023

- Deployed cloud-native ETL pipelines on GCP using GKE, BigQuery, Cloud Composer, Apache Airflow, and Cloud Storage; owned pipeline deployments and workflow orchestration at enterprise scale.
- Built Pub/Sub event-driven architecture with Cloud Functions for scalable real-time data processing; integrated Datastore as a NoSQL backend for analytics workloads.
- Delivered a React-based internal automation tool that eliminated manual pipeline provisioning, reducing engineer onboarding and pipeline creation effort substantially.

Senior Software Developer — CANADA LIFE

July 2020 – Mar 2022

Returning candidate — now bringing 4+ additional years of VP-level and capital markets engineering experience back to the team.

- Delivered core modules across Policy Management, Profile Management, Claims Processing on a Spring / Hybris Java platform — bringing direct familiarity with Canada Life's architecture and insurance domain that translates to immediate productivity on day one.
- Integrated Kafka with Kerberos authentication for secure ingestion of underwriting data from multiple sources; used Hibernate for ORM and transaction integrity across complex insurance workflows.
- Built full-stack features with Vue.js, Angular, and JSP on the frontend integrated with Spring backend services; configured Splunk dashboards and cron alerting for production monitoring — skills directly applicable to the application support responsibilities in this role.
- Led code reviews and mentored developers; collaborated with Business Analysts to translate insurance domain requirements into working software on tight delivery timelines.

Software Developer — AMDOCS DEVELOPMENT CENTER INDIA

July 2016 – July 2019

- Built Order Management and CPQ features using Spring Boot, Kafka, Zookeeper, Couchbase, and React-Redux with 90%+ JUnit test coverage; reduced system response time by 40% through targeted API call elimination and code refactoring.
- Developed and consumed RESTful and SOAP APIs for Amdocs and third-party integrations; built greenfield microservices for new product features; handled critical post-production issues during major releases at the client site in Guadalajara, Mexico.

AI PROJECTS

Aria — Personal AI Automation Agent

[github](#) / 2026 – Present

- Built a personal AI agent on Hermes with persistent memory and multi-agent orchestration — handling email triage, job opportunity tracking, and daily briefings autonomously. Agent classifies and prioritises incoming email, surfaces relevant job leads, and delivers a unified morning digest via Telegram without manual intervention.
- Designed the Obsidian vault as a structured long-term memory layer; implemented a self-improvement loop where the agent updates its own USER.md profile and skill set based on interaction history.

Tech: *Hermes Agent, Claude API, Google Workspace API, Telegram Bot API, Obsidian, Python, Git*

ReviewDrop — Multi-Tenant Review SaaS

2026 – Present

- Multi-tenant SaaS enabling shop owners to collect Google Reviews via QR/NFC tap. Claude API generates contextual review suggestions the instant a customer rates — no app install required. Built Postgres + Redis backend with Cloudflare CDN and a confetti-based gamified UX rendering at 60fps on mid-range Android.

Tech: *Claude API, Node.js, PostgreSQL, Redis, Cloudflare, React*

TECHNICAL SKILLS

Core Languages: Java, SQL, JavaScript (ES6)

Frameworks & Integration: Spring Boot, Apache Camel, REST APIs, SOAP, gRPC, React, Angular, Vue.js, Node.js

Event & Messaging: Apache Kafka, Confluent Kafka, Kafka Streams, Zookeeper, Google Pub/Sub

Cloud & Containers: GCP (GKE, BigQuery, Dataflow, Composer), AWS (working knowledge), Docker, Kubernetes

Databases: Oracle, MySQL, MongoDB, Couchbase, Redis, Apache Ignite, BigQuery, Hibernate, Elasticsearch

Observability & Support: Splunk, ELK Stack, ITRS, production incident management, cron alerting

Testing & Delivery: JUnit, TDD, GitHub Actions, Jenkins, SonarQube, CI/CD, Git

AI Coding Tools: Claude Code, Devin, GitHub Copilot

Certifications: GCP Associate Cloud Engineer · GCP Professional Data Engineer
